

Kavety. Vamsi 's Curriculum Vitae

Personal information	
Last Name, First Name	Mr. Kavety , Vamsi Krishna Sai
Position	Software Integrator/Tester Gateway Control Unit for Conti/VW
Address	Mommsenstr 34, Nürnberg, Germany
Email	vamsikrishnasai@gmail.com
Mobile	+4917666340111
Gender/Marital status	Male/Single
Overview	
Development experience on both Embedded Hardware and Software platforms.	Embedded Software Design & Development: • 8 Years of Embedded Hardware/Software Development, Integration and testing experience in Automotive domains. • Good experience on Software Integration for Gateway ECU, Telematics (Android/Embedded Linux)/Body/Powertrain Control Units, projects in Automotive domain. • Good experience on Micro controller Application level and Driver level UART programming. • Good programming and debugging skills in Embedded C/C++. • Experience with Raspberry Pi /Embedded Linux. • Good exposure on understanding requirements, design, coding, testing of complex embedded system projects. Software Integration: • Experience with AUTOSAR configuration tools like EB Tresos, Experience with Autosar ARXML files. • Experience with software Configuration management tools like MKS, PTC Integrity, IBM DOORS. • Good knowledge, Build process. • Experience on build automation and continuous integration.

Automotive Specific Experience:

- Experience with Tools: CANoe, CANalyzer, Debuggers and Oscilloscopes, CAN
- Experience with Autosar compliant projects.

Testing Experience:

- Good experience of executing integration test cases.
 - Experience of design and development of Integration test automation Continental Automation Test Platform. Experience of Bench testing to verify developed customer requirements.
 - CI/CD Integration test automation.
 - Hands on experience on unit testing tools like CANoe, Continental ATP/TEMPPO Test Manager, ATP Backend for Daimler Telematics projects
-

Technical Skill Profile

Programming languages	Embedded C/C++
Embedded Serial Protocols	Python, Shell
Embedded Serial Protocols	UART, CAN, RS-232 and RS-485
Data communications Tools	CANoe & CANalyzer
Cross Compilers	ARM, GCC & GHS
Software IDE Tools	Eclipse, Visual Studio, S32 Design Studio for Power Architecture 2017
Testing Tools	ATP Tool (Continental Automation Test Platform)
Debugger Tools	JTAG Debugger, Lauterbach Debugger, Trace32, ..
Autosar Configuration Tools	DaVinci, EB Tresos (Attended training in Elektrobit)
Testing	Regression, Integration and System Level
Micro Controllers Known	Snapdragon X16 LTE Modem ARM SoC ; SPC5746 32-bit Power MCU
Continuous Integration	Git, Gerrit, Github Jira & Jenkins
Host OS	Windows 7/10, Ubuntu Linux
Process Basic experience	Software development V- cycle, Scrum, Jira, TEMPPO

Work Experience	
Name of employer	Manu Dextra / Continental Automotive AG
Type of business	Automotive Software
Period (Dates)	August, 2019 – July, 2020
Occupation or Position	Software Integrator in Agile Team
Environment	Project Gateway Control Unit for VW, ICAS1 • Responsible for software Module integration in Agile team (Jira) and Jenkins (CI/CD Integration Testing Setup) • Responsible for Software Flashing on the Hardware for every new release in various Methods and report to SI team. For e.g.: ICAS1 Debugger, VW ODIS Diagnostic tools & Python custom tools. • Works with various teams in different sites to get planned software modules for software integration Testing and release. • Integration of software packages from multiple teams and delivers the software to System Integration Team for final release to VW. • Responsible bench testing of implemented requirements. And maintaining Hardware versions for different phases of Project. • Manual/Automation regression testing for every Sprint release Gateway control Unit in CI/CD Integration Setup.

Name of employer Type of business Period (Dates) Occupation or Position Environment Roles & Responsibilities	IPN / Continental Engineering Services GmbH Automotive Software Feb,2018 – April,2019 (1year 3 months) Software Integrator/Developer in Agile Team Project 1: Telematics Control Unit for Daimler • Chipset: Snapdragon X16 LTE Modem ARM SoC; SPC5746 32-bit Power MCU; • Android Kernel (customized for Daimler); • ARM C/C++ Compiler; • Ubuntu Virtual Machine; • S32 Design Studio for Power Architecture 2017; • CANoe + VN5610A; • IBM Rational DOORS; • Jenkins (CI/CD Integration Testing) • PE micro MULTILINK Debugger • Continental Automated Test Platform • Responsible for software integration and executing software integration test cases in Agile team(Jira). • Works with teams in different sites to get planned software modules for software integration and release. • Integration of software packages from multiple teams and delivers the software to validation team and customer. • Problem Analysis, supporting developers for bug re-production and verification of bug fixes at bench. • Peer reviews of software integration builds prepared by other team members. • Software integration test execution, planning reporting organizing in framework TEMPPPO. • Responsible bench testing of implemented requirements. • Manual/Automation regression testing for Daimler Backend and Telematics control Unit. Specific for eCall and Remote Door Function, Ready for Remote Function. Project 2 : T6PA Body Control • Acted as Taskforce member, Responsible for software integration using AUTOSAR tools (Vector DaVinci) & methodologies. • Preparation of software builds for new variant of project as per new requirement. • Maintaining of software in configuration management system (PTC Integrity). • Integration of software packages (archives) from multiple suppliers and giving software releases for Validation teams. • Software lifecycle management by using PTC Integrity. • Developing customer requirements when core developers are in congestion time.
--	--

Name of employer Type of business Period (Dates) Occupation or Position held	Robert Bosch Engineering and Business Solutions Limited, Coimbatore, India Automotive Electronics May, 2011 - April, 2014 (3 years) Sr. Hardware Engineer.
Roles & Responsibilities	Responsible for the hardware development / Integration of ECU (engine control units) for CNG/LPG power train. Team member and development partner to DGS-EC/NE1, Bosch GmbH in ECU hardware development to Fiat / Chrysler OEMs. During my journey in Bosch I was involved in hardware integration circuits for various Sensor / Actuators. In addition, I was actively participated in TechTalks, Seminars. Especially learned software development, Embedded Linux, actively participated in DOJO - Linux (Bosch Community for training and development of Open source Software into Embedded systems).
Name of employer Type of business Dates Occupation or Position	McML Protection Technologies Pvt. Ltd., Hyderabad, India. Railways July, 2009 - March, 2011 (2 years) Engineer R & D.
Roles & Responsibilities	Microcontroller Programming; Analogue circuit design; Generating BOM's; Electrical testing; Debugging electronics hardware; Flashing the code into target boards; . Maintain open issues lists, and typical engineering documents. Follow-up the activities as per the planning by weekly and update the status to management.
Education and training	
Dates Education Qualification Name and type of organisation	April, 2014 - December, 2017 Masters in Automotive Software Engineering Technical University Chemnitz
Dates Education Qualification Name and type of organisation	Oct, 2004 - March, 2008 (4 years) Bachelor in Electrical and Electronics Engineering SVEC, Jawaharlal Nehru University, Hyderabad (India)
Additional information	
Languages proficiency Driving Licence	Fluent in English, Telugu, Hindi & Beginner level of German (A2 – Level Pursuing) German Class B
