SKILLS

Automotive Cybersecurity (ISO/SAE 21434)

TARA, Attack Tree Analysis, UNECE R155/156, CAL, STRIDE, Secure Boot/Authentic Boot, OTA/FOTA/SOTA

Cryptography

AES (CBC/CTR/GCM/CMAC), HMAC, RSA, ECC, ECDH/ECDSA, PKI/KMS

Automotive Functional Safety (ISO 26262)

HARA, ASIL, DFA, FMEA, FTA, FMEDA, Safety Case

AUTOSAR Classic

Crypto Stack (CSM, CRY, Crylf, SecOC), Diagnostic Stack (DCM, UDS ISO 14229-1)

Automotive Tools

Vector DaVinci, CANoe, CANalyzer, INCA, CANTATA, Lauterbach TRACE32, SIL/HIL

Communication Protocols

CAN, CAN FD, UDS, Automotive Ethernet, DoIP, SOME/IP, SPI, I2C

Standards & Process

ASPICE, V-Model, Agile/Scrum, MISRA C:2012, MBSE (SysML/UML, DOORS, Rhapsody)

CERTIFICATIONS

TÜV SÜD Certified Automotive Cyber Security Practitioner (CACSP)

TÜV SÜD Certified Level 1 ISO 26262 Functional Safety Practitioner (FSCP)

ISTQB Certified Tester - Foundation Level (CTFL)

Rajarajeswari Mani

AUTOMOTIVE CYBERSECURITY & FUNCTIONAL SAFETY ARCHITECT

To: Hiring Manager

Date: 27 August 2026

Subject: Application for Automotive Cybersecurity and Functional Safety Architect Role

PROFILE FIT

- 14+ years in automotive embedded software engineering, including 7+ years specializing in automotive cybersecurity (ISO/SAE 21434) and functional safety (ISO 26262).
- TÜV SÜD-certified in ISO/SAE 21434 and ISO 26262, with deep expertise in TARA/VARA, secure embedded architecture, and cryptography across ADAS/AD, AUTOSAR, and BMS platforms.

VALUE OFFERED

- AUTOSAR Crypto Stack architect: HSM-based key management, SecOC, Secure Boot/Authentic Boot, Secure JTAG/Debug, and OTA/FOTA/SOTA readiness.
- Cross-domain alignment of cybersecurity and functional safety: TARA/HARA reconciliation, ASIL/CAL classification, and OEM compliance across BMW, Volkswagen/Audi, and Hyundai Kia programs.

CURRENT ROLE FOCUS

- Automotive Cybersecurity Architect - ISO/SAE 21434 TARA & Secure Architecture
- Functional Safety Engineer - ISO 26262 HARA/ASIL, FMEA/FTA
- AUTOSAR Security Engineer - Crypto Stack, HSM, Secure Diagnostics

COVER LETTER

Dear Hiring Manager,

I am applying for the Automotive Cybersecurity and Functional Safety Architect role at your organisation. In my current role at EDAG Engineering GmbH, I contribute to system-level TARA per ISO/SAE 21434 and configure the AUTOSAR Crypto Stack using Vector DaVinci, including KeyM and CAL-rated SecOC with freshness/counter synchronization for ASIL D/C signals on a BMW-compliant ADAS ECU.

I architect secure embedded controls, secure JTAG/debug, secure access, Secure Boot/Authentic Boot, HSM-based key storage, secure logging, and OTA/FOTA/SOTA readiness, and support penetration/fuzz testing and vulnerability analysis to validate resilience against STRIDE-classified threats. My functional safety background includes HARA, ASIL determination, FMEA/FTA/DFA, and FMEDA-based hardware safety metrics, enabling me to reconcile ISO 26262 and ISO/SAE 21434 requirements across cross-functional teams.

I bring proven delivery across the full V-Model lifecycle and Agile, with TÜV SÜD certifications in ISO/SAE 21434 and ISO 26262, and hands-on experience securing AUTOSAR ECUs for BMW, Volkswagen/Audi, and Hyundai Kia programs.

I would welcome the opportunity to discuss how my cybersecurity and functional safety expertise can support your program milestones.

Thank you for your consideration.

Sincerely,

Rajarajeswari Mani
