SKILLS

Build & Release Automation
C/C++, Python, Groovy, Shell

Standards & Methodologies
ASPICE SWE.5, ISO 21434, Agile, CI/CD/CT, TDD, SW/HW Debugging

Automotive Tools
Development & Integration

DevOps for Embedded
CMake, Jenkins (CloudBees), Docker/Kubernetes, Artifactory, Grafana/ElasticSearch

Infrastructure as Code
Docker, Pipeline-as-Code (Groovy/Jenkinsfile/Github-Actions), Kyverno-Policy management

DevSecOps
SAST/DAST, container & dependency scanning (Trivy/Snyk), secrets management, SBOM

Build Systems
Yocto, Zephyr, AOSP, Custom (Bricks-Evo)

Cybersecurity
OTA, Partial-Update Strategy

Security Features
SecureAccess, SecureJTAG, Signing & Integrity of binaries

Interfaces
UART, I2C, SPI, CAN, Ethernet

CERTIFICATIONS

ISTQB Certified Tester - Foundation Level (CTFL)

Vinod Kumar Neelakantam

EMBEDDED PLATFORM INTEGRATION ENGINEER

To: Hiring Manager

Date: 23 August 2026

Subject: Application for Embedded Platform Integration Engineer /Build & Release / DevOps Role

PROFILE FIT

- 14+ years in automotive embedded software: ECU and ADAS integration, platform validation, release management.
- 7+ years automotive cybersecurity: TARA, ISO/SAE 21434, OTA/SOTA, SecureAccess/SecureJTAG, binary integrity controls.

VALUE OFFERED

- ASPICE SWE.5-aligned CI/CD architect: pipelines, quality gates, traceability for distributed teams.
- Security-hardened releases: SAST/SCA, SBOM, SecureAccess/SecureJTAG, binary signing, CSMS/SUMS evidence readiness.

CURRENT ROLE FOCUS

- Embedded Software Integration Engineer - Automotive/ADAS Platforms
- Build & Release Engineer - CI/CD, Embedded-DevOps
- Automotive Cybersecurity Engineer - Secure OTA/SOTA Delivery

COVER LETTER

Dear Hiring Manager,

I am applying for the Embedded Platform Integration Engineer role at your Organisation. In my current role at AUMOVIO (Continental), I lead multi-variant C/C++ builds on ADAS platforms using Jenkins/CloudBees, Docker, Kubernetes, Artifactory, and Python automation, with expertise in CMake, Yocto, AOSP, and Zephyr build systems.

I architect ASPICE SWE.5-aligned CI/CD ecosystems with security-hardened release workflows: SAST/SCA scanning, SBOM generation, container vulnerability management, and secrets control. My cybersecurity focus includes 7+ years in TARA-based engineering, ISO/SAE 21434 compliance, OTA/SOTA delivery, and implementation of SecureAccess/SecureJTAG with binary signing and integrity controls for production platforms.

I bring system-level validation expertise through HIL/SIL testing, smoke/regression/timing strategies, and interface validation across CAN, Ethernet, SPI, I2C, and UART protocols. I am committed to delivering predictable, auditable, and compliant releases for distributed engineering teams.

I would welcome the opportunity to discuss how my embedded integration and cybersecurity expertise can support your platform milestones.

Thank you for your consideration.

Sincerely,

Vinod Kumar Neelakantam
